

# Symantec™ On-Demand Protection for Outlook® Web Access

Helps prevent data loss due to Web-based access to corporate email

---

## Overview

Symantec On-Demand Protection for Outlook Web Access helps to prevent the exposure and loss of sensitive data that resides in corporate email, sensitive data that resides in corporate email, such as company financials, customer information, and intellectual property. Symantec On-Demand Protection for Outlook Web Access helps eliminate the risks associated with delivering corporate email data to unmanaged computers by delivering a Symantec™ On-Demand Agent that provides integrated endpoint security technologies to help ensure compliance with security policies, prevent unauthorized data transfer, and protect confidential information.

---

## Key benefits

- Helps to prevent data from being stolen or left behind on unmanaged computers
- Helps protect customer, employee, and corporate email data that is accessed via Outlook Web Access
- Helps ensure endpoint compliance on unmanaged devices
- Helps protect confidential data by creating a secure environment that provides encryption and file deletion upon session termination
- Helps prevent network downtime caused by the propagation of malicious code in the corporate network by unmanaged devices

- Provides protection from viruses and worms by enforcing antivirus and personal firewalls via Host Integrity policy checks
  - Lowers total cost of ownership by delivering endpoint protection on-demand via the existing Outlook Web Access infrastructure
- 

## Key features

- **Virtual desktop**—Data protection via virtualization and encryption of the downloaded email data, combined with restricted system access
- **Host integrity**—Predefined checks for antivirus, personal firewalls and service packs; custom checks for process, registry key, file, and operating system to help ensure compliance with endpoint security policies
- **Malicious code prevention**—Detection and prevention of keyloggers, screen scrapers, and account creation via behavioral and signature-based engine to protect end-user credentials
- **Cache cleaner**—Data sanitization via deletion of browser history, and information download via Outlook Web Access
- **Connection control**—Outbound connection blocking from endpoint based on domain/URL, IP, or port
- **Adaptive policies**—Location switching based on endpoint parameters such as IP range, registry key, DNS, and others

## Data Sheet: Endpoint Security Symantec On-Demand Protection for Outlook Web Access

### Example scenarios

- End user using Outlook Web Access at a hotel business center
- End user using Outlook Web Access from a personal home computer
